

Lettuce planting schedule example

- Start seeds indoors 6-8 weeks before last spring frost
- Harden off seedlings for a week before transplanting outdoors
- Directly sow lettuce seeds outdoors 2 weeks before last spring frost. You can sow earlier with season extender like hoop tunnels.
- Succession plant every 1-2 weeks in the spring. For example April 5th, 10th, 15th, May 1st, 5th, 10th & 15th.
- Grow for bolt resistance in the spring and summer and underplant it under larger plants for partial shade.
- Sow cold hardy lettuce late summer & Sept for fall and winter harvests
